

## SUSTAINABILITY

### Sustainability Experience and Overview

Butler & Young Building Control have over the years been involved in many sustainable, carbon free and Green buildings incorporating all types of innovations but most commonly carbon neutral designs, rainwater harvesting, biomass boilers/ ground source heat pump, passivhaus technique and a range of latest insulating materials. Indeed Butler & Young have been at the forefront of conservation of fuel and power and are involved with the current Approved Document L and the upcoming 2013 updates.

Butler & Young have been specialist Building Control provider for a range of building types, superstores, hotels, schools, offices and domestic examples can be provided.

### Added Value

Butler & Young's national coverage with a local presence assists with meetings and site visits, early assistance with the design team always shows benefits to the design and adds value, having worked on many sustainable projects collaborative knowledge is unrivalled for the Building Regulation input and process.

Within the Butler & Young Group we can assist with BREEAM, SAP, SBEM, Code for Sustainable Homes, DEC, EPC and Air Testing.

Butler & Young are currently working towards full incorporation with BS14001.
